

## Troubleshooting and the Home Network

Almost all people need the presence of computer to help them in many aspects of their life. When we want to get the quickest information about the new brand of a beautiful dress and also to buy it, the computer is there with us. Whenever a student wants to make a decent research for their next science project, the computer will also required. Even hobbies are like games are also dominated by the products from computer software. All of them are made possible not merely by the computer, but also by the connector that allow all people to relate, interact, inform, and many other activities. This connector is called the Internet.

You might also have one computer with Internet connection in your home. But, what if you have more than one computer? Yes, the solution is to make a home network for the whole computers or laptops in your house to make them all capable in sharing the Internet. However, possessing the interconnected facility requires basic ability for Troubleshooting a Home Network.

Unlike a computer that is connected with Internet individually, in home network there are many components that are involved. This makes more possibilities to problem occurrences that need the owner in Troubleshooting a Home Network.
